

## Controlling for the future

Edwards SAPIEN 3 Ultra valve facilitates future coronary access

You're always thinking ahead. We can get behind that.

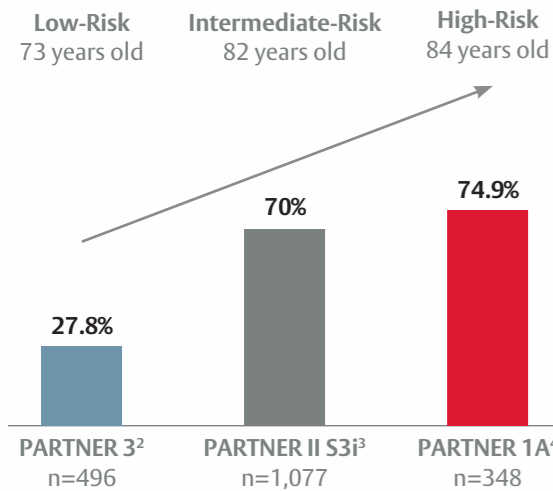

Edwards

# Your first-time valve choice today affects your patients' treatment options tomorrow.

Up to 75% of severe aortic stenosis patients undergoing TAVI suffers of CAD\* and may require future coronary intervention.<sup>1</sup>

Prevalence of CAD in TAVI patients.

Future intervention may be performed under limited TAVI experience.<sup>5</sup>

78% of PCI centers do not have a TAVI program<sup>5</sup>

>54% of the population live closer to a PCI-only center<sup>5</sup>

As post-TAVI PCI procedures increase in number, valve design becomes of primary importance.

~33% longer PCI procedure time in patients with prior TAVI<sup>6</sup>

16.5% PCI procedures failure in sAS patients with prior TAVI<sup>6</sup>

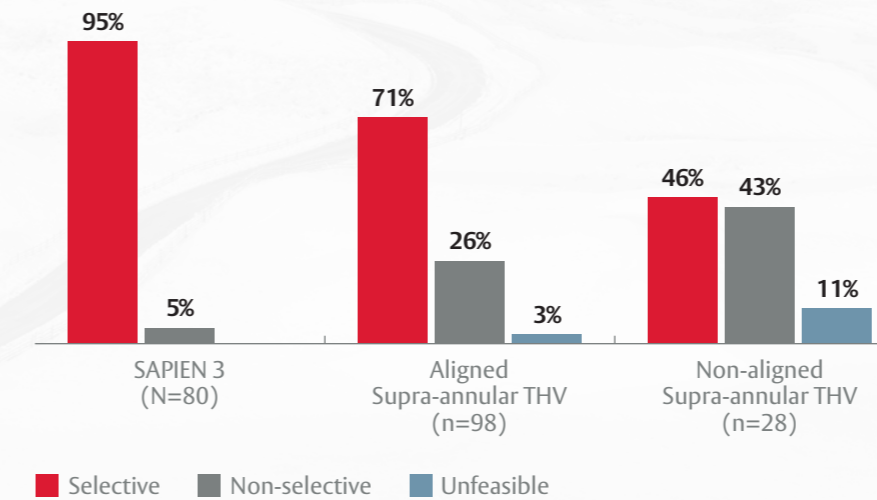

VS.

3.9% PCI failures in patients with no TAVI<sup>6</sup> (p < 0.001)

SAPIEN 3 Platform provides selective coronary access. By design.

Left / Right Coronary Artery<sup>7</sup>

Choosing SAPIEN 3 valve as the first THV reduces the risk of impaired coronary access.

78.8% free access to coronaries<sup>8</sup> after 2<sup>nd</sup> implant in low surgical risk population (N=137)

The SAPIEN 3 Ultra valve facilitates future coronary access with low frame height, intra-annular leaflets, and large open cells.<sup>(+)</sup>

100% successful post-TAVI coronary access (68/68 patients<sup>9</sup>)

Edwards SAPIEN 3 Ultra valve CE Mark for Valve in Valve<sup>10</sup>

- THV in THV aortic
- THV in surgical aortic
- THV in surgical mitral

\*Coronary Artery Disease

# Protect your patients by preserving their future treatment options with SAPIEN 3 Ultra valve.
