Aortic stenosis doesn't wait. Being diagnosed as soon as possible and exploring treatment options are important steps in protecting your health.

It is important to tell your doctor as soon as you experience any of these symptoms or in case your symptoms worsen.

I have been diagnosed with aortic stenosis

I am experiencing the following symptoms (tick all that apply):

- Chest pain or tightness
- Shortness of breath
- Lightheadedness or dizziness
- Fainting
- Heart palpitations
- Swollen ankles or feet
- Difficulty walking short distances
- Sensations of a rapid or irregular heartbeat
- I no longer engage in physical activities that I used to enjoy doing 6 months ago

Please list any additional symptoms you may be experiencing:

.....

.....

Your doctor may need to know more about the symptoms you have been experiencing and how they may have changed or worsened over time. Check one:

- I have not experienced any symptoms
- I have experienced symptoms and they have stayed the same
- I have experienced symptoms and they have worsened recently

What activities could you do 12 months ago that you cannot do today?

Important questions to ask your doctor

When you visit your doctor, it is important to mention even minor symptoms or changes to your daily routine. This may be a sign of aortic stenosis or your aortic stenosis getting worse.

Following are additional questions to ask your doctor. Talking through your answers with your doctor may help you receive a timely diagnosis and put you on the path for the best treatment option.
